Professional Summary

- Recent Computer Science graduate with hands-on experience designing and developing backend software, distributed systems, and cloud-native applications using **Python**, **Java**, and **SQL**. Experienced in building scalable REST APIs, asynchronous services, authentication systems, and production deployments on AWS. Strong foundation in software engineering, system design, and modern backend technologies, with practical experience integrating AI capabilities into real-world engineering solutions.

Education

Kalinga Institute of Industrial Technology, Bhubaneswar, India
Bachelor of Technology in Computer Science and Engineering (Honours) September 2022 – May 2026
CGPA: 7.71/10

Technical Skills

- **Programming Languages:** Python, Java, SQL, C++
- **Backend Development:** FastAPI, Spring Boot, REST APIs, SQLAlchemy, Microservices, Asynchronous Programming
- **Cloud & DevOps:** AWS (ECS, S3, RDS), Docker, CI/CD Pipelines, Render, Vercel
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, ChromaDB, pgvector
- **Software Engineering:** Git, Linux, Object-Oriented Programming, Distributed Systems, API Design, OAuth 2.1, JWT
- **AI / ML:** LLMs, LangChain, LangGraph, RAG Pipelines, Embedding Models, Vector Databases, MCP (Model Context Protocol), Ollama

Projects

Nascent AI – Autonomous Software Engineering Platform June 2026
Python, FastAPI, PostgreSQL, LangGraph, GitHub Apps, Docker, JWT, Next.js, Render
https://nascentai.vercel.app/

- Designed and developed a distributed backend platform that automates GitHub repository analysis, implementation planning, source code modifications, branch management, and pull request creation through authenticated GitHub workflows.
- Engineered asynchronous workflow orchestration using FastAPI and LangGraph, coordinating repository analysis, context retrieval, code generation, Git operations, and approval pipelines for reliable software delivery.
- Implemented secure GitHub App authentication using JWT and installation access tokens, enabling authenticated access to private repositories, automated commits, branch creation, and pull request generation through the GitHub API.
- Built a production-ready backend with PostgreSQL persistence, Dockerized deployment, REST APIs, and cloud hosting on Render, integrated with a Next.js frontend deployed on Vercel.

Unbiased – Developer Context Platform Mar 2026 – Apr 2026
Python, FastAPI, FastMCP, GitHub APIs, OAuth 2.1, PostgreSQL (Neon), Render
https://unbiased-ax79.onrender.com/

- Developed a backend platform exposing structured developer metadata through standardized APIs, enabling AI clients to retrieve project, technology, and contribution context on demand.
- Implemented OAuth 2.1 authentication and authorization workflows compatible with remote MCP clients, resolving deployment, redirect, and authentication challenges in a cloud environment.
- Designed backend services for context filtering and retrieval, integrating GitHub APIs and PostgreSQL to efficiently surface relevant developer information while reducing unnecessary data transfer.
- Containerized and deployed the application on Render, delivering a production-ready service submitted to the Anthropic MCP Registry and `mcp.directory`.

Specforge – AI-Native Product Management Platform Apr 2026 – June 2026
Python, FastAPI, PostgreSQL, Next.js, OpenAI, Docker, Vercel, Render
https://specforge-phi.vercel.app/

- Developed a full-stack product management platform that converts customer conversations, feature requests, and documents into structured Product Requirement Documents (PRDs), user stories, and engineering specifications using LLM-powered workflows.
- Designed scalable backend services with FastAPI and PostgreSQL for authentication, document processing, project management, and persistent data storage following RESTful API design principles.
- Integrated AI-powered requirement extraction, structured document generation, and collaborative editing workflows, reducing manual effort in software planning and technical documentation.
- Containerized and deployed the platform using Docker with cloud hosting on Render and Vercel, enabling reliable production deployments and scalable collaboration across multiple projects.

Professional Experience

VIAI Beauty — Full-Stack Developer Intern (Remote, US) Oct 2025 – Dec 2025
Python, FastAPI, AWS ECS, DynamoDB, S3, Shopify APIs, Docker

- Developed and deployed cloud-native backend microservices using FastAPI, Docker, and AWS ECS to automate large-scale customer review ingestion and asynchronous data processing.
- Designed scalable REST APIs integrated with DynamoDB and Amazon S3, improving data reliability and supporting high-volume asynchronous workflows.
- Implemented Shopify API integrations with robust error handling, monitoring, and retry mechanisms, improving platform stability and data consistency across ingestion pipelines.

The Inner Labs — Backend Developer Intern (Remote) Jan 2026 – Feb 2026
Java, Spring Boot, Next.js, REST APIs

- Developed backend services using Java Spring Boot, designing and maintaining RESTful APIs supporting frontend product features and business workflows.
- Implemented frontend enhancements with Next.js, integrating backend APIs to improve application functionality and user experience.
- Diagnosed and resolved production and staging issues across backend and frontend components, improving application stability while collaborating with cross-functional engineering teams.
