Computer science graduate (B.Tech Honours, 2026) with backend internship experience building FastAPI and Spring Boot services, including an AWS-hosted service that processed 5,000+ reviews per day through asynchronous queues. Built projects with LLM agents and MCP servers using LangGraph, PostgreSQL/pgvector, and test-driven development.

Education

Kalinga Institute of Industrial Technology — Bhubaneswar, India
B.Tech (Honours) in Computer Science and Engineering, CGPA: 7.71/10 — *Sept 2022 – Oct 2026*

Experience

VIAI Beauty — Oct 2025 – Dec 2025
Full-Stack Developer Intern — *Remote, USA*

- Built concurrent Python/FastAPI microservices on AWS ECS, integrating Shopify APIs and processing **5,000+ reviews per day** through asynchronous queues.
- Redesigned DynamoDB table schemas around ASIN to support direct product lookups, improving how product data is modeled and queried.
- Wrote tests and debugged failures in Dockerized services to improve reliability before production rollout.

The Inner Labs — Jan 2026 – Mar 2026
Backend Developer Intern — *Remote*

- Delivered an end-to-end "Content Ideas" feature, implementing Spring Boot REST APIs to add and archive ideas and expose search-intent distribution, plus a Next.js interface.
- Debugged and managed multiple services orchestrated with Kubernetes, coordinating fixes across them as part of the deployment workflow; documented API contracts for **4 frontend-backend integrations**.
- Wrote unit tests and resolved **10+ tracked defects** during an agile sprint.

Projects

Nascent AI | *FastAPI, PostgreSQL, SQLAlchemy, LangGraph, LangChain, GitHub Apps, Next.js* — GitHub

- Built an AI coding agent that clones repositories, summarizes files, plans changes from natural-language requests, generates diffs, and opens commits and pull requests through a GitHub App; exposed workflows through an asynchronous FastAPI backend with JWT authentication.
- Followed Test-Driven Development (TDD) for core agent and API behavior, writing tests for workflow transitions, authentication, approval/resume, and diff handling. Added a PostgreSQL-backed LangGraph checkpointer and SQLAlchemy connection pooling to support resumable runs.
- Used LangSmith traces to identify sequential per-file summarization and API rate limits as scaling bottlenecks. Built a Next.js dashboard with **12+** views and used `useMemo` to avoid re-parsing multi-file diffs.

SpecForge | *FastAPI, SQLAlchemy, PostgreSQL, pgvector, LangGraph, LangChain, Next.js* — GitHub

- Built an asynchronous FastAPI/SQLAlchemy data pipeline that turns interviews, tickets, and PDFs into ranked customer pain points, storing text embeddings in pgvector on PostgreSQL.
- Structured the pipeline into ingestion, similarity-based clustering, scoring, and retrieval-augmented generation stages (orchestrated with LangGraph); prioritized themes using a weighted frequency-severity ranking.
- Added a human-approval checkpoint and Pydantic output validation, with tests covering ingestion, ranking, and structured-output paths.

Unbiased | *FastAPI, FastMCP, PostgreSQL, OAuth 2.0, Gemini API, Next.js* — GitHub

- Built a developer-context MCP server with FastAPI and FastMCP, storing context in PostgreSQL and exposing task-aware tools over REST and MCP. Used the Gemini API to synthesize raw GitHub data into structured developer profiles (stack, projects, experience) and to filter relevant context for each coding task.
- Implemented GitHub OAuth 2.0 authentication and session management in the FastAPI backend, so AI coding assistants can retrieve a user's task-relevant context over MCP.
- Deployed on Render and debugged database and network integration failures.

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, C++, SQL
AI & Agentic Systems: LangGraph, LangChain, MCP (FastMCP), RAG, embeddings, pgvector, Gemini API, tool calling, human-in-the-loop workflows
Backend & Databases: FastAPI, Spring Boot, REST APIs, asyncio, SQLAlchemy, PostgreSQL, MySQL, DynamoDB, Redis
Cloud & DevOps: AWS (ECS, S3, RDS), Docker, Kubernetes
Frontend: React, Next.js
Tools & Testing: Git, GitHub Apps, PyTest, JUnit, TDD
