Summary: Software Engineer (BTech CSE, 2026) with internship experience building asynchronous cloud-deployed backend services using Python and Java. Hands-on with AWS (ECS, S3, DynamoDB, RDS), PostgreSQL, REST APIs and secure authentication (OAuth 2.1, JWT). Strong in data structures and algorithms, with a record of shipping and debugging production services.

Education

Kalinga Institute of Industrial Technology, Bhubaneswar, India
Bachelor of Technology (Honours) in Computer Science and Engineering

Relevant Coursework: Operating Systems, Computer Networks, Database Management Systems, Computer Architecture, Data Structures & Algorithms

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript, C++, SQL

Systems & Full-Stack: React, Next.js, FastAPI, Spring Boot, REST APIs, Microservices, Authentication, API Integration, Asynchronous Processing

Testing, Quality & Security: Unit Testing, PyTest, Debugging, Secure Coding Practices (OAuth 2.1, JWT), Technical Documentation

Cloud, Infrastructure & Databases: AWS (ECS, S3, RDS), Docker, CI/CD pipelines, PostgreSQL, MySQL, Redis, DynamoDB

Additional Technologies: Git, GitHub APIs, LangGraph

Projects

Nascent AI – Software Engineering Automation Platform
Python, FastAPI, PostgreSQL, Next.js, React, GitHub Apps, LangGraph, JWT, Render

- Built an AI coding agent using a LangGraph pipeline that clones a GitHub repository, summarizes files with an LLM, plans changes from a natural-language request, generates diffs and opens commits and PRs through a GitHub App, served by an async FastAPI backend with JWT authentication.
- Designed normalized PostgreSQL schemas with SQLAlchemy connection pooling and a Postgres-backed LangGraph checkpointer, so runs pause for human approval and resume. Analyzed the pipeline and found that sequential per-file LLM summarization and token-rate limits cap a run at about 20 files on the free tier.
- Built the Next.js dashboard with reusable components (ConfirmDialog, Badge) across 12+ views, used useMemo to avoid re-parsing multi-file diffs, and documented the architecture and API endpoints.

Specforge – Requirements & Test Asset Generation Tool
Python, FastAPI, PostgreSQL, PyTest, Docker, Next.js, React, GitHub Actions

- Built a requirements-engineering tool with a FastAPI backend and Next.js dashboard (reusable StatusPill and StatCard components) that converts varied inputs into structured requirements and test artifacts, with 85% PyTest coverage and CI on GitHub Actions.
- Implemented Context API for shared state management across dashboard views.

Unbiased – Developer Context Service
Python, FastAPI, PostgreSQL, Next.js, React, GitHub APIs, OAuth 2.1, Render

- Built a developer-identity MCP server with FastAPI and FastMCP that exposes task-aware tools over REST and MCP. One example is `get_context_for`, which uses an LLM (Gemini) to filter stored context down to what a given task needs. It is backed by PostgreSQL (NeonDB).
- Implemented secure OAuth 2.1 authentication with JWT-based sessions, plus a Next.js landing page that handles the authorization redirects. Documented the data access model.
- Deployed on Render with Git-based deployment, debugged database and network integration failures in production.

Professional Experience

VIAI Beauty — Full-Stack Developer Intern (Remote, USA)
Python, FastAPI, AWS ECS, DynamoDB, S3, Shopify APIs, Docker

- Built concurrent Python (FastAPI) microservices on AWS ECS that integrate with Shopify APIs and process 5,000+ reviews per day through asynchronous queues.
- Redesigned DynamoDB table schemas to key on ASIN (Amazon Standard Identification Number) for direct product lookups.
- Wrote tests and debugged failures to stabilize services before production rollout.

The Inner Labs — Full-Stack Developer Intern (Remote)
Java, Spring Boot, Next.js, React, REST APIs

- Redesigned the Action Center feature by adding an end-to-end 'Content Ideas' sub-section: Spring Boot REST endpoints for adding new ideas, viewing search intent distribution and archiving ideas, plus a Next.js UI that consumes them.
- Turned product requirements into technical designs and documented API workflows for 4 frontend-backend integrations.
- Wrote unit tests and resolved 10 tracked defects in an agile sprint workflow, contributing to stable releases.
